Question: 1

A network administrator is completing an In-Service Software Upgrade (ISSU) for an Intelligent Resilient Framework (IRF) virtual devices. The device has two members. Each member has one management module. Member 1 is currently the master. The administrator has initiated a rollback time for this upgrade.

When should the administrator accept the upgrade?

- A. After upgrading both members of the IRF virtual device.
- B. After checking the new software's ISSU compatibility but before upgrading either member.
- C. After upgrading member 1 but before switching over to and upgrading member 2
- D. After upgrading and switching over to member 2 but before upgrading member 1

Answer: A

Question: 2

An HP switch is a member of an Intelligent Resilient Framework (IRF) virtual device that has two members. What is a proper situation for issuing the mad restore command on this switch?

- A. The IRF link has failed, and MAD has caused a new member to become master. The administrator wants to restore the previous master's MAC address.
- B. The IRF link has failed, and MAD placed this member in recovery mode. The administrator wants the switch to automatically repair the failed link.
- C. The IRF link has failed, and the administrator needs to put this switch in MAD recovery mode.
- D. The IRF link has failed, and MDA placed this member in recovery mode. The active member has gone offline.

Answer: B

Question: 3

Refer to the exhibit.

These three routers are currently configured for BGP. They do not apply any routing policy in terms of BGP on routers or attributes advertised to an received from peers. How can the network administrator for Router 1 cause Router 1 to advertise 192.0.2.0/24 to Router 2 and Router 3?

- A. Enable BGP routing on RAGG1
- B. Add a null route to 192.0.2.0/24
- C. Apply route policy 1 as an inbound policy for both peers
- D. Apply route policy 1 as an outbound policy for both peers

Answer: B

Question: 4

Refer to the exhibit.

A network administrator up a remote mirroring on the HP Comwaer switches in the exhibit. The administrator must define several port while entering mirroring-group commands on these switches.

Which port should be the reflector port (Sometimes called monitor-egress port)?

- A. Switch 1,G1/0/2
- B. Switch3, T1/0/4
- C. Switch 1, T1/0/25
- D. Switch 1, G1/0/1

Answer: B

Question: 5

A company is determining whether HP IMC User Access manager (UAM) meets its needs for a RADIUS server. The company requires a solution for dynamic access control lists based on user identity and location (connected switch ID). Which statement correctly describes UAM support for this requirement?

- A. Administrator can use UAM service and access rules to apply identity-based ACLs. The location-based component is configured in individual switch CLIs.
- B. UAM can only meet these requirements if it is synchronized with Microsoft Active Directory (AD).
- C. UAM can meet these requirements if the company adds Endpoint Admission Defense (EAD) to the solution.
- D. Administrator can configure UAM service policies, scenarios, and access rules to meet these requirements.

Answer: D
