Question: 1

You have 2 SAP HANA systems. You are working in 1 of these systems.
Which of the following do you use to read data from and write data to the other, remote SAP HANA system? (Choose two)

- A. SAP HANA smart data access
- B. Remote providers
- C. Virtual column
- D. Virtual table

Answer: A, D

Question: 2

What is the minimum requirement for a valid analytic view?

- A. One fact table and one attribute view
- B. One attribute view
- C. One fact table and two attribute views
- D. One fact table

Answer: D

Question: 3

Which type of connection does SAP HANA Direct Extractor Connection (DXC) use to transfer data to SAP HANA?

- A. Secondary database connection
- B. RFC connection
- C. ODBC connection
- D. HTTP connection

Answer: D

Question: 4

When you use SLT replication, which of the following determines the name of the SAP HANA schema where replicated data is stored?

- A. The name of the RFC connection
- B. The name of the secondary database connection
- C. The name of the source system schema

D. The name of the replication configuration

Answer: D

Question: 5

You want to run a report on data with multiple currencies. You want to allow end users to select the target currency at runtime.

Which options does SAP recommend for defining the currency conversion? (Choose two)

- A. Currency conversion during data load
- B. A CE_CONVERSION function in a calculation view
- C. Measures enabled for conversion in an analytic view
- D. A calculated column in an analytic view

Answer: B, C

Question: 6

Your data models use hierarchies.

In which of the following front end tools can you access these hierarchies? (Choose three)

- A. SAP Lumira
- B. SAP BusinessObjects Analysis, edition for Microsoft Office
- C. SAP BusinessObjects Dashboards
- D. SAP Crystal Reports 2011
- E. SAP BusinessObjects Analysis, edition for OLAP

Answer: A, B, E

Question: 7

Which of the following remote data sources can you access with SAP HANA smart data access? (Choose three)

- A. XML file
- B. SAP Adaptive Server Enterprise
- C. SAP NetWeaver Business Warehouse
- D. Apache Hadoop
- E. Teradata Database

Answer: B, D, E

Question: 8

Which of the following selection types are available when creating a variable in an analytic view?

(Choose three)

- A. Single value
- B. Direct
- C. Interval
- D. Range
- E. Column

Answer: A, C, D

Question: 9

Where can you reactivate a user after too many invalid logon attempts? (Choose two)

- A. In the INVALID_CONNECT_ATTEMPS view
- B. In the user-specific schema
- C. In the user properties in the SAP HANA studio
- D. In the SQL Console

Answer: C, D

Question: 10

Which versions of your information models are visible on the History tab of the Modeler perspective in the SAP HANA studio?

- A. Only the last active version
- B. The last active and inactive versions
- C. All active and inactive versions
- D. All active versions

Answer: D

Question: 11

You would like to authorize a user to see data in an analytic view only for company code 1000 and fiscal year 2000 or for company code 1005 and fiscal year 2005.

Which of the following achieves this requirement?

- A. • One analytic privilege: company code = 1000, fiscal year = 2000
- One analytic privilege: company code = 1005, fiscal year = 2005
- B. • One analytic privilege: company codes = 1000 and 1005
- One analytic privilege: fiscal years = 2000 and 2005
- C. One analytic privilege: the combination of company code = 1000 and fiscal year = 2000, and the combination of company code = 1005 and fiscal year = 2005
- D. One analytic privilege: company codes = 1000 and 1005, and fiscal years = 2000 and 2005

Answer: A

Question: 12

Which of the following can be grouped inside a single schema in an SAP HANA database?

- A. Information models
- B. Packages
- C. Users
- D. Database tables

Answer: D

Question: 13

You want to implement an SAP HANA data model based on tables in a new schema that you just created.

Which technical user requires select rights on your new schema?

- A. _SYS_BI
- B. _SYS_SECURITY
- C. _SYS_BIC
- D. _SYS_REPO

Answer: D

Question: 14

What does SAP recommend to improve performance of data models in SAP HANA?

- A. Move intensive calculations to the front-end application
- B. Perform calculation before aggregation
- C. Utilize as many different engines as possible
- D. Minimize data transfer between the engines

Answer: D

Question: 15

What are the advantages of implementing SAP HANA using an SAP rapid-deployment solution over a traditional implementation project? (Choose three)

- A. Preconfigured content
- B. Fixed-scope implementation
- C. No need for consultants

- D. Customized content
- E. Lower risk

Answer: A, B, E

Question: 16

What is the lowest level of granularity you can use in an analytic privilege?

- A. A view
- B. A column
- C. An attribute value
- D. An attribute

Answer: C

Question: 17

How can you analyze a performance issue in the execution of an SQL statement using the SQL Console? (Choose two)

- A. Use the Prepare Statement command from the right-click menu in the SQL Console.
- B. Query the table "SYS"."CACHE_P_QUERIES_" after the execution of the SQL statement.
- C. Use the Explain Plan command from the right-click menu in the SQL Console.
- D. Use EXPLAIN PLAN in the SQL statement and query the EXPLAIN_PLAN_TABLE.

Answer: C, D

Question: 18

You have two analytic views: one contains actual data and the other contains plan data. You want to combine the two result sets and keep actual and plan data on separate records.
In the SAP HANA studio, which of the following can you use to achieve this?

- A. JOIN in an analytic view
- B. UNION in a calculation view
- C. PROJECTION in a calculation view
- D. JOIN in a graphical calculation view

Answer: B

Question: 19

Which of the following SAP HANA schemas contains the runtime objects of activated views?

- A. _SYS_STATISTICS

- B. _SYS_REPO
- C. _SYS_BI
- D. _SYS_BIC

Answer: D

Question: 20

Which of the following should you try to implement as best practices for data modeling? (Choose two)

- A. Perform aggregation in an attribute view.
- B. Use filters to restrict the number of rows on the tables that make up the analytic views.
- C. Execute calculated columns before any aggregation is performed.
- D. Use a UNION when combining analytic views in a calculation view.

Answer: B, D
