# Version: 18.4

---

**Question: 1**

---

HOTSPOT

You need to configure a conditional access policy to meet the compliance requirements.

You add Exchange Online as a cloud app.

Which two additional settings should you configure in Policy1? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

| New                                                                                                                                                                                                                                                                                                                                                                   | Conditions                                                                                                                                                                                                                                                        | Device state (preview)                                                                                                                                                                                                                                                                                      |

---

**Answer:**

---

Explanation:

Suggested Answer:

The screenshot shows the 'New' policy configuration window in Microsoft Intune. The 'Name' field is set to 'Policy1'. Under 'Assignments', 'Users and groups' and 'Conditions' are both set to '0 selected'. The 'Device state (preview)' pane on the right shows configuration options for 'Include' and 'Exclude' device states.

## Question: 2

On which server should you install the Azure ATP sensor?

- A. Server 1
- B. Server 2
- C. Server 3
- D. Server 4
- E. Server 5

---

**Answer: A**

---

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure-advanced-threat-protection/atp-capacity-planning>

However, if the case study had required that the DCs can't have any s/w installed, then the answer would have been a standalone sensor on Server2. In this scenario, the given answer is correct. BTW, ATP now known as Defender for Identity.

---

**Question: 3**

---

You need to meet the compliance requirements for the Windows 10 devices.

What should you create from the Intune admin center?

- A. a device compliance policy
- B. a device configuration profile
- C. an application policy
- D. an app configuration policy

---

**Answer: C**

---

Explanation:

---

**Question: 4**

---

HOTSPOT

You need to meet the Intune requirements for the Windows 10 devices.

What should you do? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

Settings to configure in Azure AD:

|                              |
|------------------------------|
| ▼                            |
| Device settings              |
| Mobility (MDM and MAM)       |
| Organizational relationships |
| User settings                |

Settings to configure in Intune:

|                                    |
|------------------------------------|
| ▼                                  |
| Device compliance                  |
| Device configuration               |
| Device enrollment                  |
| Mobile Device Management Authority |

---

**Answer:**

---

Explanation:

Settings to configure in Azure AD:

|                              |
