QUESTION: 1

What is the difference between functional and non-functional requirements?

Option A : Functional requirements are documented, while non-functional requirements are not.

Option B : Functional requirements describe how the system should behave, while non-functional requirements describe specific features or characteristics of the system.

Option C : Functional requirements focus on the user interface, while non-functional requirements focus on the system's performance.

Option D : Functional requirements are critical for the success of a project, while non-functional requirements are optional.

Correct Answer: B

Explanation/Reference:

Functional requirements describe what the system should do or how it should behave in terms of specific functionalities and features. They typically focus on the system's behavior, inputs, outputs, and interactions with users or other systems. On the other hand, non-functional requirements describe specific features or characteristics of the system that are not related to its functionalities. They typically address qualities such as performance, reliability, security, usability, and scalability. Non-functional requirements are focused on how well the system performs, rather than what it does. They are often related to constraints, conditions, and quality attributes that are important for the overall success of the system.

QUESTION: 2

Which publication option in Oracle Fusion Product Hub determines the level of auditing for the published items?

Option A : Item Assignment

Option B : Audit Level

Option C : Publish Objects

Option D : Validation Level

Correct Answer: B

Explanation/Reference:

The Audit Level option in Oracle Fusion Product Hub determines the level of auditing for the published items. By selecting the appropriate audit level, you can track and monitor changes made to the published items, ensuring data integrity and accountability.

QUESTION: 3

What is the purpose of documenting requirements?

Option A : To provide a reference for future project phases and documentation

Option B : To add unnecessary complexity to the project

Option C : To prevent stakeholders from changing their requirements

Option D : To ensure that all requirements are implemented correctly

Correct Answer: A

Explanation/Reference:

Documenting requirements is important in order to have a clear record of what the stakeholders have requested. This documentation serves as a reference for future project phases, such as design and development. It helps ensure consistency and alignment throughout the project lifecycle. Additionally, it provides a basis for communication and collaboration among the project team and stakeholders. -

QUESTION: 4

What is the main purpose of the Oracle Product Lifecycle Management (PLM) 2023 Implementation Professional certification?

Option A : To assess proficiency in using Oracle PLM 2023 for project management

Option B : To validate knowledge and skills in implementing Oracle PLM 2023 solutions

Option C : To provide an overview of Oracle PLM 2023 features and functionalities

Option D : To test knowledge of general product lifecycle management concepts

Correct Answer: B

Explanation/Reference:

The Oracle Product Lifecycle Management (PLM) 2023 Implementation Professional certification is specifically designed to validate an individual's knowledge and skills in implementing Oracle PLM 2023 solutions. It focuses on hands-on implementation experience and covers various aspects of the product lifecycle management process.

QUESTION: 5

What does it mean to restrict in the context of product lifecycle management?

Option A : Restrict refers to limiting access or controlling permissions for specific system functions or data.

Option B : Restrict refers to the use of physical barriers to protect sensitive assets or information.

Option C : Restrict refers to the act of seeking feedback and suggestions from stakeholders during the

concept development phase.

Option D : Restrict refers to the process of narrowing down various alternatives to select the most suitable solution.

Correct Answer: A

Explanation/Reference:

Restricting in product lifecycle management means enforcing limitations on access or controlling permissions to certain system functions or data. This restriction is typically implemented to ensure that only authorized personnel can access or modify sensitive information, perform critical operations, or make changes to the system. By controlling access, organizations can enhance security, reduce the risk of unauthorized actions, and maintain data integrity and confidentiality.

QUESTION: 6

What is the purpose of using a UI (User Interface) for supplier product data onboarding?

Option A : To automate data mapping and transformation processes

Option B : To track and manage supplier data submission deadlines

Option C : To provide a user-friendly platform for supplier collaboration

Option D : To generate comprehensive reports on supplier performance

Correct Answer: C

Explanation/Reference:

The use of a UI (User Interface) in supplier product data onboarding serves the purpose of providing a user-friendly platform for supplier collaboration. The UI allows suppliers to interact and input their product data in a more intuitive and visually appealing way. It provides features such as form-based data entry, drop-down menus, and validation checks to ensure accuracy and

completeness. The UI facilitates efficient communication and collaboration between the supplier and the organization conducting the onboarding process.

QUESTION: 7

What is the significance of assigning attributes to categories in Oracle PLM?

Option A : To determine the order in which products are displayed within a category

Option B : To restrict access to certain categories based on user roles

Option C : To track the history of category modifications for auditing purposes

Option D : To define the characteristics and properties of products within a category

Correct Answer: D

Explanation/Reference:

Assigning attributes to categories in Oracle PLM allows you to define and capture the characteristics and properties of products within those categories. By associating specific attributes with categories, you can ensure consistent and accurate information about products, facilitating better organization and search capabilities. These attributes can include product specifications, technical features, or any other relevant information that helps describe and categorize the products effectively.

QUESTION: 8

What is the purpose of implementing user authentication in Oracle Product Lifecycle Management (PLM) 2023?

Option A : To ensure that only authorized users can access the PLM system

Option B : To provide a personalized user experience in the PLM system

Option C : To track user activities and generate audit reports

Option D : To allow users to access the PLM system from any device

Correct Answer: A

Explanation/Reference:

Implementing user authentication in Oracle PLM 2023 is crucial to ensure that only authorized users can access the system. User authentication mechanisms such as passwords, biometrics, or two-factor authentication add a layer of security by verifying the identity of users before granting them access to the PLM system. This helps protect sensitive data and prevent unauthorized access.

QUESTION: 9

Which of the following activities are typically included in the change management process in Oracle PLM implementation?

Option A : Technical configuration of the PLM solution.

Option B : Evaluating and approving change requests.

Option C : Developing user manuals and training materials.

Option D : Conducting system performance testing.

Correct Answer: B
