Version: 5.0

Question: 1

What are some SAP recommended ways of adding custom code to an SAP Fiori elements application?

Note: There are 3 correct answers to this question.

- A. Create new templates
- B. Use building blocks
- C. Create apps using the custom page template in the application generator
- D. Use controller extensions
- E. Use private methods of SAP Fiori elements

Answer: B, C, D

Explanation:

SAP Fiori elements supports extensibility through standardized extension points. These include:

Building Blocks: Reusable content blocks that provide structure and function.

Custom Page Templates: Offered via SAP Fiori tools' application generator to build entire new views.

Controller Extensions: Allow insertion of custom logic by extending the base controller of the standard application.

Using private methods is not supported due to encapsulation, and creating new templates contradicts the low-code paradigm.

Reference: SAP Fiori Elements Developer Guide; SAP Extensibility Guidelines.

Question: 2

What are some benefits of using OData V4 compared to OData V2?

Note: There are 3 correct answers to this question.

- A. Better UX consistency
- B. Better data compression
- C. Advanced analytical capabilities
- D. Improved data types
- E. Flexible programming model

Answer: C, D, E

Explanation:

OData V4 offers:

Advanced analytical capabilities: including grouping and aggregation.

Improved data types: such as more precise decimal handling.

Flexible Programming Model: thanks to updated APIs and features.

While V4 enables a better technical foundation, UX consistency and compression improvements are not explicitly advantages of V4 over V2.

Reference: SAP OData V4 Model Implementation Guide.

Question: 3

How can you configure the Flexible Column Layout in an SAP Fiori elements application?

Note: There are 2 correct answers to this question.

- A. By adding a setting to the manifest.json file
- B. By implementing a flexible custom extension
- C. By adding a setting to the package.json file
- D. By using the Page Map

Answer: A, D

Explanation:

Flexible Column Layout is a feature that supports responsive design. Configuration can be done via:

manifest.json under the sap.ui5/routing/config section.

Page Map in SAP Fiori tools, where the layout behavior can be visually defined.

package.json is unrelated, and flexible custom extensions are not mandatory for layout control.

Reference: SAPUI5 SDK; SAP Fiori Elements Configuration Guide.

Question: 4

To visualize metrics using cards, which SAP Fiori elements template does SAP recommend to use?

- A. Analytical List Page
- B. List Report Page
- C. Overview Page
- D. Custom Page

Answer: C

Explanation:

The Overview Page (OVP) template uses cards to visualize key metrics, charts, and actionable insights. It's designed to aggregate and highlight information from multiple sources.

Reference: SAP Fiori Design Guidelines; Overview Page Developer Guide.

Question: 5

What are some examples of extension points?

Note: There are 3 correct answers to this question.

- A. Custom column
- B. Field building block
- C. Custom section
- D. Custom action
- E. Table building block

Answer: A, C, D

Explanation:

Extension points allow app developers to inject custom UI or logic into standard apps:

Custom column: Add additional columns to tables.

Custom section: Extend the Object Page with new sections.

Custom action: Trigger application-specific actions.

Field/Table building blocks are reusable constructs, not extension points per se.

Reference: SAP Fiori Elements Extensibility Documentation.
