Question: 1

A non-relational database is best suited for:

- A. Highly structured data
- B. Fixed schemas
- C. Flexible data formats
- D. Small datasets only

Answer: C

Explanation:

Non-relational databases handle unstructured or semi-structured data. They scale easily. Schema flexibility supports modern applications.

Question: 2

Which SQL object uniquely identifies records?

- A. Index
- B. Primary key
- C. View
- D. Trigger

Answer: B

Explanation:

Primary keys uniquely identify table records. They prevent duplicate entries. Keys maintain data integrity.

Question: 3

Which threat encrypts data and demands payment?

- A. Spyware
- B. Trojan
- C. Ransomware
- D. Adware

Answer: C

Explanation:

Ransomware locks data using encryption. Attackers demand payment for decryption. Backups reduce damage.

Question: 4

Which practice best protects sensitive data?

- A. Data duplication
- B. Encryption

- C. Compression
- D. Replication

Answer: B

Explanation:

Encryption converts data into unreadable formats. Only authorized users can decrypt it. This protects confidentiality.

Question: 5

Which exam characteristic applies to AT0-001?

- A. Hands-on labs only
- B. Performance-based tasks
- C. Multiple-choice questions
- D. Essay-based responses

Answer: C

Explanation:

The AT0-001 exam uses multiple-choice questions. It tests foundational IT knowledge. The format suits beginners.
