Question: 1

How can smart spreadsheets be used to validate and map product data fields during the supplier on boarding process?

- A. By conducting automatic data quality checks
- B. By providing a visual interface for data mapping
- C. By automatically populating missing data fields
- D. By generating reports on data accuracy and completeness

Answer: A

Explanation:

Smart spreadsheets in the supplier onboarding process can perform automatic data quality checks. These checks help identify and validate the completeness, accuracy, and consistency of the supplier's product data. By leveraging smart spreadsheet functionality, validations and rules can be applied to ensure that the data entered meets the defined criteria and requirements. This helps maintain data integrity and minimizes errors during the onboarding process.

Question: 2

How can you set up product categories in Oracle PLM?

- A. Manually create categories one by one
- B. Import categories from an external spreadsheet
- C. All of the above
- D. Utilize predefined category templates provided by Oracle

Answer: C

Explanation:

In Oracle PLM, you can set up product categories using various methods. You can manually create categories one by one within the system, import categories from an external spreadsheet to save time and effort, and also utilize predefined category templates provided by Oracle that offer standard structures for common categories. All of these options are available to help you set up your product categories according to your specific requirements and preferences.

Question: 3

What is the purpose of data classification in product data governance?

- A. To restrict data availability
- B. To eliminate data redundancy
- C. To prioritize data security measures
- D. To categorize data based on business relevance

Answer: D

Explanation:

The purpose of data classification in product data governance is to categorize data based on its business relevance and importance. This helps organizations to prioritize data management efforts, allocate resources effectively, and determine appropriate security measures for different types of data. Data classification enables organizations to identify and focus on the most critical and valuable data assets, ensuring that they receive appropriate levels of attention and protection.

Question: 4

How can you assign a change order to a specific department or individual in Oracle PLM 2023?

- A. Change Order Action
- B. Change Order Assessment
- C. Change Order Assignment
- D. Change Order Responsibility

Answer: C

Explanation:

Oracle PLM 2023 provides the "Change Order Assignment" feature to set the responsibility for a change order. By assigning a change order to a specific department or individual, you can ensure the designated entity is responsible for managing and executing the necessary tasks related to the change order. -

Question: 5

Which of the following is an advantage of using item import, item batches, and item maintenance in Oracle Product Lifecycle Management?

- A. All of the above
- B. Streamlining the management of items
- C. Improving data accuracy and consistency
- D. Reducing manual data entry efforts

Answer: A

Explanation:

Using item import, item batches, and item maintenance in Oracle Product Lifecycle Management offers several advantages. It helps reduce manual data entry efforts by allowing bulk import of items from external sources. It streamlines the management of items by grouping them into batches for specific processing or actions. Lastly, it improves data accuracy and consistency by providing efficient means for creating, updating, and deleting item records within the PLM system.
