Question: 1

Which Oracle Cloud Infrastructure component is used to logically isolate resources for access control?

- A. Availability Domain
- B. Compartment
- C. Fault Domain
- D. Region

Answer: B

Explanation:

Compartments in OCI are used to logically organize and isolate cloud resources. They help implement access control policies and manage resources effectively within an organization.

Question: 2

To organize the doclets into folders, how is this achieved?

- A. Sections
- B. Review Phase
- C. Reference Doclet
- D. Style Sample
- E. Report Content

Answer: C

Question: 3

What is the primary purpose of an Availability Domain in OCI?

- A. To manage user authentication
- B. To isolate resources for high availability
- C. To define billing accounts
- D. To configure IAM policies

Answer: B

Explanation:

Availability Domains are isolated data centers within a region designed to provide fault tolerance and high availability for applications deployed across them.

Question: 4

Which OCI service provides scalable object storage for unstructured data?

- A. Block Volume
- B. File Storage
- C. Object Storage
- D. Database Storage

Answer: C

Explanation:

Object Storage is designed for storing large amounts of unstructured data such as backups, images, and logs with high durability and scalability.

Question: 5

Which identity feature allows OCI compute instances to access resources without storing credentials?

- A. User groups
- B. Dynamic groups
- C. Policies
- D. Compartments

Answer: B

Explanation:

Dynamic groups allow instances to be treated as principals, enabling secure access to resources without embedding credentials in code or configuration.

Question: 6

When creating a Management Reporting data source connection to Oracle Analytics Cloud (OAC), which syntax is for the server name field?

- A. [The OAC IP address]:[accessing port]
- B. The OAC URL ending in /essbase
- C. The OAC URL ending in /essbase:[accessing port]
- D. The OAC IP address

Answer: D

Question: 7

What is the role of a Virtual Cloud Network (VCN) in OCI?

- A. To manage user roles
- B. To provide database services
- C. To define a private network environment
- D. To monitor cloud usage

Answer: C

Explanation:

A VCN is a customizable private network in OCI where you can define IP ranges, subnets, and gateways to securely connect resources.
