Question: 1

A user wants to logically isolate resources within Oracle Cloud Infrastructure. Which feature should be used?

- A. Availability Domains
- B. Compartments
- C. Fault Domains
- D. Regions

Answer: B

Explanation:

Compartments are used in OCI to organize and isolate resources logically. They help manage access and governance within an organization.

Question: 2

You define an approval policy at the dimension level. What statement correctly describes how this approval policy interacts with related data chain objects?

- A. The approval policy applies to the node types and hierarchy sets in the dimension.
- B. The approval policy cascades down to only the data chain objects specified in the policy definition.
- C. The approval policy applies to hierarchy sets but not node sets in the dimension.
- D. The approval policy applies to only the dimension and does not apply to related data chain objects.

Answer: A

Explanation:

This option is because when you define an approval policy at the dimension level, it applies to all the node types and hierarchy sets that belong to the dimension. You can also define approval policies at the node type or hierarchy set level to override the dimension level policy.

Question: 3

Which component is responsible for defining permissions in Oracle Cloud Infrastructure?

- A. Groups
- B. Users
- C. Policies
- D. Compartments

Answer: C

Explanation:

Policies define what actions users or groups can perform on OCI resources. They are written using a specific policy syntax.

Question: 4

Which type of compute instance provides dedicated physical hardware?

- A. Virtual Machine
- B. Container Instance
- C. Bare Metal Instance
- D. Shared Instance

Answer: C

Explanation:

Bare metal instances provide dedicated physical servers without a hypervisor, offering maximum performance and control.

Question: 5

Which are two reasons for creating a migration snapshot?

- A. To download the enterprise data locally for offline work
- B. To migrate the enterprise data between different releases of the environment
- C. To restore the artifacts and data to the snapshot state
- D. To refresh the test environment from the production environment
- E. To export the enterprise data to an external application

Answer: C, D

Explanation:

According to the Oracle Help Center, migration snapshots are used to migrate application artifacts and data between environments, such as refreshing the test environment from the production environment. Migration snapshots can also be used to restore the artifacts and data to the snapshot state in case of any issues or errors. The other reasons are not valid for creating a migration snapshot.

Question: 6

Which OCI storage service is best suited for storing large amounts of unstructured data with high durability?

- A. Block Volume
- B. File Storage
- C. Object Storage
- D. Boot Volume

Answer: C

Explanation:

Object Storage is designed for storing unstructured data such as images, videos, and backups with high durability and scalability.
