Question: 1

Which tool allows real-time data retrieval in NetSuite?

- A. CSV Import
- B. Saved Search
- C. Script Editor
- D. Role Manager

Answer: B

Explanation:

Saved Searches provide real-time access to NetSuite data without needing manual updates. They dynamically reflect current records and allow filtering, sorting, and grouping of information. This makes them ideal for operational reporting and monitoring business processes continuously.

Question: 2

Which feature enables aggregation functions like SUM and COUNT?

- A. Formula Builder
- B. Summary Types
- C. KPIs
- D. Dashboards

Answer: B

Explanation:

Summary Types allow aggregation of data using functions such as SUM, COUNT, AVG, MIN, and MAX. These are essential for summarizing large datasets in Saved Searches. They help users analyze totals and trends efficiently.

Question: 3

Which tool is best for multi-dataset analysis?

- A. Saved Search
- B. SuiteAnalytics Workbook
- C. Report Builder
- D. SuiteScript

Answer: B

Explanation:

SuiteAnalytics Workbook enables combining multiple datasets and performing advanced analysis. It supports pivot tables and visualizations for deeper insights. This makes it ideal for complex reporting scenarios requiring multiple data sources.

Question: 4

What does a KPI represent?

- A. Database structure
- B. Key Performance Indicator
- C. System configuration
- D. User permission

Answer: B

Explanation:

A KPI is a Key Performance Indicator used to measure business performance. It helps organizations track progress toward goals. KPIs are commonly displayed on dashboards for quick decision-making.

Question: 5

Which component displays metrics visually over time?

- A. Trend Graph
- B. CSV Export
- C. Script Debugger
- D. Role Center

Answer: A

Explanation:

Trend Graphs visualize how data changes over time. They are useful for identifying patterns and forecasting trends. Businesses rely on them for performance tracking and decision-making.
