Question: 1

What is the purpose of SAP Integration Suite:

- A. Data storage only
- B. Application UI design
- C. Integration of applications and data
- D. Operating system management

Answer: C

Explanation:

SAP Integration Suite enables seamless integration between SAP and non-SAP systems, supporting APIs, events, and data integration scenarios.

Question: 2

Which component of Integration Suite handles APIs:

- A. Event Mesh
- B. API Management
- C. Cloud Connector
- D. Workflow Service

Answer: B

Explanation:

API Management provides tools to design, publish, secure, and monitor APIs, enabling controlled access to backend services.

Question: 3

What is SAP Cloud Connector used for:

- A. User authentication
- B. Secure connection between on-premise and cloud
- C. Database management
- D. UI design

Answer: B

Explanation:

SAP Cloud Connector acts as a bridge between on-premise systems and SAP BTP, ensuring secure communication and access control.

Question: 4

Which communication type is synchronous:

- A. Event messaging

- C. Queue processing
- D. Event Mesh

Answer: B

Explanation:

REST API calls are synchronous, meaning the client waits for a response from the server before continuing.

Question: 5

What is a benefit of asynchronous communication:

- A. Tight coupling
- B. Improved scalability
- C. Blocking processes
- D. Slower performance

Answer: B

Explanation:

Asynchronous communication decouples systems and allows them to process messages independently, improving scalability and resilience.

Question: 6

Which SAP BTP service supports workflow automation:

- A. SAP Build Process Automation
- B. SAP HANA Cloud
- C. SAP Event Mesh
- D. SAP Datasphere

Answer: A

Explanation:

SAP Build Process Automation allows automation of business workflows and processes with low-code tools.

Question: 7

What is the role of SAP Build Apps:

- A. Database management
- B. Low-code app development
- C. Infrastructure monitoring
- D. Security configuration

Answer: B

Explanation:

SAP Build Apps provides a low-code/no-code environment for creating applications quickly without

extensive programming.

Question: 8

Which authentication protocol is commonly used in SAP BTP:

- A. FTP
- B. OAuth2.0
- C. SMTP
- D. SNMP

Answer: B

Explanation:

OAuth2.0 is widely used for secure authorization and authentication in SAP BTP applications and APIs.

Question: 9

What is OpenID Connect used for:

- A. Data storage
- B. Authentication layer on OAuth2
- C. Database queries
- D. Logging

Answer: B

Explanation:

OpenID Connect is an identity layer built on OAuth2.0 that enables authentication and user identity verification.
