Question: 1

How can users remove duplicates from a dataset in Snowflake?

- A. Using the DISTINCT keyword
- B. Using the UNIQUE constraint
- C. Using the REMOVE_DUPLICATES function
- D. Using the DISTINCT function

Answer: A

Question: 2

What is the purpose of the TRANSFORM keyword in Snowflake?

- A. To load data into Snowflake tables
- B. To define schema for data transformations
- C. To mark a point for transactional processing
- D. To perform data transformations using JavaScript

Answer: D

Question: 3

How can Snowflake's automatic scaling feature contribute to performance optimization?

- A. By adjusting warehouse sizes based on query complexity
- B. By automatically adding or removing clusters based on workload demands
- C. By optimizing SQL queries for better performance
- D. By increasing network bandwidth for data transfer

Answer: B

Question: 4

What role does Snowflake's Data Lake play in its architecture?

- A. To store raw, unstructured data for future analysis
- B. To transform data into actionable insights
- C. To manage computed resources for processing data
- D. To integrate with external data sources and platforms

Answer: A

Question: 5

How can users filter rows in a dataset based on specific conditions in Snowflake?

- A. Using the WHERE clause
- B. Using the FILTER keyword
- C. Using the IF condition
- D. Using the CASE statement

Answer: A

Question: 6

How does Snowflake support geographically distributed data processing and analytics?

- A. By restricting data processing to a single data center location
- B. By distributing data across multiple storage clusters
- C. By providing global availability and scalability
- D. By encrypting data during cross-region data transfers

Answer: C

Question: 7

Which Snowflake component enables users to load data from external cloud storage platforms such as Amazon S3 or Azure Blob Storage?

- A. Snowflake Data Sharing
- B. Snowflake Data Exchange
- C. Snowpipe
- D. Snowflake External Tables

Answer: D

Question: 8

How does Snowflake support data sharing and collaboration among different organizations?

- A. By enabling organizations to directly access each other's databases
- B. By providing secure and controlled data sharing through Snowflake Data Sharing
- C. By requiring organizations to physically exchange data files
- D. By restricting data access to within the organization

Answer: B

Question: 9

Which Snowflake feature provides data classification capabilities to help organizations protect sensitive

data during sharing?

- A. Data Encryption
- B. Data Masking
- C. Data Classification
- D. Role-based access control

Answer: C

Question: 10

What key feature of Snowflake's architecture enables users to easily share and collaborate on data projects?

- A. Data Lake
- B. Virtual Warehouse
- C. Data Sharing
- D. Query Processing Engine

Answer: C
