Question: 1

How does Serverless Kubernetes (ASK) support rapid application development and deployment?

- A. By enforcing strict deployment schedules
- B. By offering built-in testing frameworks
- C. By streamlining the CI/CD pipeline
- D. By limiting access to cloud resources

Answer: C

Question: 2

Which feature of Serverless Kubernetes (ASK) helps optimize resource utilization?

- A. Auto scaling
- B. Service mesh integration
- C. Edge computing capabilities
- D. Container technology

Answer: A

Question: 3

How can a container registry help with disaster recovery and backup strategies for containerized applications?

- A. By automatically resolving container issues
- B. By providing a backup of container images
- C. By scaling containers based on demand
- D. By monitoring container health metrics

Answer: B

Question: 4

What kind of workload is often deployed in ACK environments?

- A. Virtual machines
- B. Monolithic applications
- C. Microservices
- D. Mobile applications

Answer: C

Question: 5

What is the primary purpose of Alibaba Cloud's Container Service for Kubernetes (ACK)?

- A. Deploying virtual machines
- B. Managing containers
- C. Provisioning networking resources
- D. Configuring load balancers

Answer: B

Question: 6

What is the purpose of tags in a container registry?

- A. To categorize different types of containers
- B. To identify container images with unique identifiers
- C. To manage network routing for containers
- D. To determine container resource limits

Answer: B

Question: 7

What is the key benefit of using Edge container service (ACK@Edge) for distributed applications?

- A. Improved security
- B. Reduced latency
- C. Lower cost
- D. Increased scalability

Answer: B

Question: 8

What is the primary purpose of using ACK?

- A. Secure cloud storage
- B. Container orchestration
- C. Machine learning models deployment
- D. Network virtualization

Answer: B

Question: 9

Which of the following is NOT a benefit of using container technology?

- A. Improved application portability
- B. Reduced dependency conflicts
- C. Lower resource utilization
- D. Simplified deployment process

Answer: C

Question: 10

What authentication method is commonly used to secure access to a container registry?

- A. Basic authentication
- B. OAuth authentication
- C. Certificate-based authentication
- D. Token-based authentication

Answer: D
