Question: 1

Each project contains a:

- A. ".gitlab-ci.yml" file
- B. DOCKERFILE
- C. Repository
- D. Set of user-set environment variables

Answer: C

Question: 2

If your project in Gitlab is public, is there a way for the anonymous and guest users to be denied even the read access for your artifacts in public pipelines by setting properly the ".gitlab-ci.yml" file?

- A. No, as artifacts are either in read-access OR granted permission to be downloaded and further edited by having artifact's keyword "public" set to "true".
- B. Yes, by having artifact's keyword "public" set to "false".

Answer: B

Question: 3

Gitlab can set a minimum number of approves for merge requests, in order for them to be able to get merged.

- A. TRUE
- B. FALSE

Answer: A

Question: 4

Within a ".gitlab-ci.yml" file you can define:

- A. The scripts you want to run.
- B. Dependencies and caches.
- C. The IDs the Gitlab projects are going to be set up with.
- D. Whether you need your pipeline jobs to run automatically or trigger them manually.

Answer: ABD

Question: 5

You can set the option to a Merge Request so that it will automatically merge the code in the target branch once the current running pipeline successfully completes.

- A. TRUE
- B. FALSE

Answer: A
